NEW FEATURES OF
TurningPoint
COMING SOON
STUDENT ENGAGEMENT

TurningPoint users can easily create and ask interactive polling questions, as well as deliver assessments, evaluations and surveys to their students. With help from this learning tool, formative and summative assessments given during class are great ways to prompt conversation about relevant topics!

LEARNING RETENTION

TurningPoint tracks the effectiveness of both teaching and learning materials. In addition to assigning homework and surveys, professors may review participant development and evaluate the effectiveness of individual questions with generated reports through the software.

CONVENIENT DATA STORAGE

TurningPoint has the ability to run cataloged, detailed reports as well as track performance by demographics at any time. Professors may also upload previous questions and PowerPoints to be accessed, reviewed and saved by students on their personal study-schedules.

EASY USE & ACCESSIBILITY

Professors can poll on top of web pages, videos, documents or any application using the floating toolbar. On the receiving side, TurningPoint allows students to respond to the PowerPoint voting questions using their clickers, mobile phones, tablets and/or computers.
FEATURES OF LCD Clickers

- **Polling Response**: Clickers allow students to easily respond to real-time questions in various formats such as multiple-choice, matching, true/false, and priority ranking.

- **Hotspots**: Clickers will now be involved in the new hotspot, image-based question type. This enables instructors to upload a picture into TurningPoint and designate the areas which encompass the correct response.

- **Attendance/Geofencing**: Through the polling software, attendance can be tracked through answer participation. Clickers can also motivate student attendance by having professors select the “response-buttons-only” setting during certain classes.
